ChemLab / Reaction evidence

Experimental feasibility remains unresolved. Support means reported precedent or a source-derived structural analogy. Contradiction concerns listed atom sources; omitted reagents can change that finding. Conditions, yields and procedures are excluded.

Knowledge: Lowe CC0 reported reactions / RDChiral context / auxiliary RXNMapper
`Route: 0c70653c381ba97cc88d3003b22a80776b44a82e47f76cdd0d0e266f8b95f328`

Every selected reaction occurrence appears below.

Required step occurrences: 4. Route evidence: unresolved. Every step is required; support does not establish cross-step experimental compatibility

s0

Evidence outcome: support

`O=C1NC(=O)c2ccccc21>>O=C1NCc2ccccc21`

Check	Outcome / scope
atom origin	observed / Absent listed sources need investigation; counts do not certify atom balance or chemistry
conditions	not checked / outside requested scope
context precedent	context replay match / source context and exact replay
contextual feasibility	unknown / no complete condition free chemical oracle
edits	unknown / unmapped atoms prevent complete edit observation
exact precedent	unknown / no exact reported match
listed atom sources	pass / listed element sources present
mapping	pass / mapped product atoms have provenance
stoichiometry	unknown / coefficients and byproducts not supplied

context precedent

100 returned source records; duplicated reports are not independent confirmations.

Additional returned sources are retained in the evidence JSON.

s1

Evidence outcome: unresolved

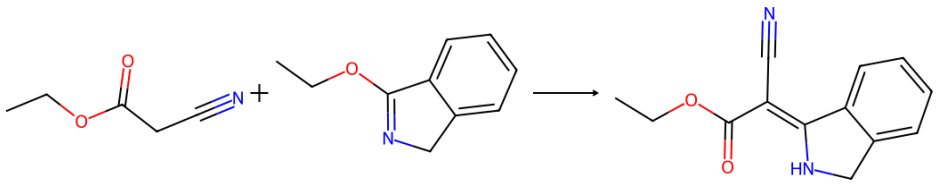

`CC[O+](CC)CC.O=C1NCc2ccccc21>>CCOC1=NCc2ccccc21`

Check	Outcome / scope
atom origin	observed / Absent listed sources need investigation; counts do not certify atom balance or chemistry
conditions	not checked / outside requested scope
context precedent	unknown / no complete context support
contextual feasibility	unknown / no complete condition free chemical oracle
edits	unknown / unmapped atoms prevent complete edit observation
exact precedent	unknown / no exact reported match
listed atom sources	pass / listed element sources present
mapping	pass / mapped product atoms have provenance
stoichiometry	unknown / coefficients and byproducts not supplied

s2

Evidence outcome: unresolved

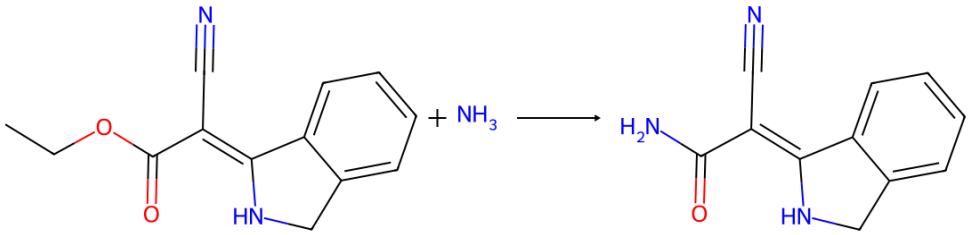

`CCOC(=O)CC#N.CCOC1=NCc2ccccc21>>CCOC(=O)/C(C#N)=C1\NCc2ccccc21`

Check	Outcome / scope
atom origin	observed / Absent listed sources need investigation; counts do not certify atom balance or chemistry
conditions	not checked / outside requested scope
context precedent	unknown / no complete context support
contextual feasibility	unknown / no complete condition free chemical oracle
edits	unknown / unmapped atoms prevent complete edit observation
exact precedent	unknown / no exact reported match
listed atom sources	pass / listed element sources present
mapping	pass / mapped product atoms have provenance
stoichiometry	unknown / coefficients and byproducts not supplied

s3

Evidence outcome: unresolved

CCOC(=O)/C(C#N)=C1\NCc2ccccc21.N>>N#C/C(C(N)=O)=C1/NCc2ccccc21

Check	Outcome / scope
atom origin	observed / Absent listed sources need investigation; counts do not certify atom balance or chemistry
conditions	not checked / outside requested scope
context precedent	unknown / no complete context support
contextual feasibility	unknown / no complete condition free chemical oracle
edits	unknown / unmapped atoms prevent complete edit observation
exact precedent	unknown / no exact reported match
listed atom sources	pass / listed element sources present
mapping	pass / mapped product atoms have provenance
stoichiometry	unknown / coefficients and byproducts not supplied
